SUMMARY

With over 8 years of experience working in the Internet and New Media industry, designing and developing web-based applications for both consumers and businesses, my skill set is one of great diversity. Most recently I've spent the past 2 years building high profile websites for global brands with an emphasis on experience design, usability and agile project management.

I am formally trained in dynamic application development and have years of experience creating rich applications as well as integrating cross browser compatible interfaces that compliment scalable, and flexible business models.

A born leader, I am the person who will be able to communicate between your visually-oriented designers as well as your analytically-thinking developers and programmers; a skill I have perfected through both in person and virtual team management.
